AXPC Highlights American Energy Production Ahead of State of the Union Address

Washington, D.C. – Washington D.C. – American Exploration & Production Council (AXPC) President Bruce Thompson released the following statement ahead of the President’s State of the Union address:

“This past year was record-breaking for U.S. oil and natural gas, with domestic production reaching all-time highs. American producers’ relentless focus on innovation has helped get us to where we are today and will continue to drive this industry’s future. New technologies have enabled producers to lower emissions, all while improving the efficiency and safety of operations. Thanks to these high-tech innovations, we have ushered in the era of American energy abundance and turned the United States into a global energy super power. This has strengthened our nation’s energy security and helped families and businesses here at home by creating jobs and lowering energy prices.

“Looking forward, AXPC supports policies that will help U.S. oil and natural gas producers stay on the path of innovation and growth. We need trade policies that are fair, balanced and provide certainty. We need to strengthen our nation’s energy infrastructure in order to improve access to affordable energy for Americans. And we need common sense regulations, both onshore and offshore, that will allow for oil and natural gas to be produced in a safe, responsible way.

“The future of American energy production has never been brighter. We look forward to working with the Administration and the new Congress to ensure that the United States remains a world energy leader.”

###

About the American Exploration & Production Council

AXPC is a national trade association representing more than 30 of the largest independent oil and natural gas exploration and production companies in the United States. Dedicated to safety, science and technological advancement, AXPC members strive to deliver affordable, reliable energy to consumers while positively impacting the economy and the communities in which we live and operate.
